ComplianceWare™

Software Certainty

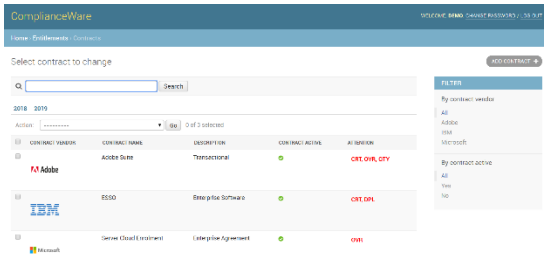
When it comes to software any business environment is inherently complex and subject to constant change. It can be difficult to know at any specific time what's actually deployed, and where. And even then there's the myriad licensing models to take into account – from simple installs to value units, from users to cores – *it can all get very confusing*.

Bring it all together

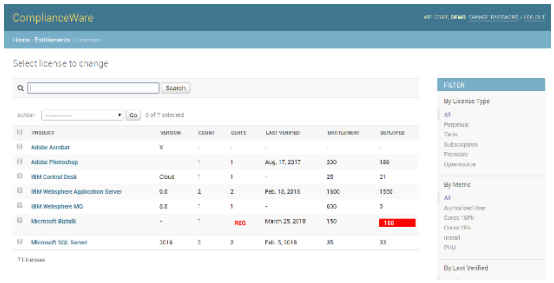
ComplianceWare will collect, transform and classify your data into a comprehensive array of deployed software presented in a simple, concise, and accessible web application with extensive reporting and diagnostic features.

- **Multiple Data Sources** with ComplianceWare's agentless scripts or data imports from other source systems (eg. Microsoft SCCM or IBM's ILMT) gather information across all of your systems (Desktop & Server, Windows, Mac & Unix operating systems).
- **Intuitive Interface** a simple List-View display format combined with multiple search and filter capabilities is smartly coupled with context-based link navigation to deliver a quick and effective lens into your systems & software landscape.
- **Powerful Analytics** through in-built drill-down capability and comprehensive reporting via Microsoft Excel, data is readily available and accessible, neatly summarised on the central interactive Dashboard:

Register Contracts



Track Licenses



Monitor Cloud Consumption

and more …

Unravelling License Complexity for Business

ComplianceWare delivers software certainty - providing the record of fact and the confidence and intelligence needed to defend any vendor audit or license review.

License Position

Know you're compliant by tracking what you're entitled to versus what you've actually deployed.

- **Deployments** – perform software discovery as often as needed and compare the IT landscape at different points in time to pinpoint changes.
- **Entitlements** – register entitlements and maintain currency, along with recording actual license certificates & proof of ownership documentation.
- **Licensing** – built on python the core pandas compute engine crunches counts, installs, cores, and applies bundling rules, core/processor factors and minimums.

Vendors and Contracts

Good practice requires constant oversight across suppliers, keeping track of terms and conditions and key changes over time.

- **Vendors** – access software by vendor and corresponding licensing rules, contractual terms & conditions, apply satisfaction ratings and keep those all-important comments & notes.
- **Contracts** – maintain licenses and respective records under corresponding contracts, and manage user requests via the incorporated email request facility.
- **Audits** – easily retrieve artefacts to defend audits or to facilitate true-ups and the numerous ongoing compliance requirements & reporting obligations.

Cloud Consumption

With the increase in off-premise software get consolidated consumption reporting across providers.

- **Real-time** – view cost or consumption information for subscriptions across the following core platforms:

  AWS, Azure, Google Cloud, IBM Cloud, Oracle Cloud

- **Secure** – all API calls are provisioned under the OAuth2 protocol and controlled by System Administrators to ensure no unnecessary access or permissions are granted.

Business Insight

ComplianceWare brings it all together – transforming vast data collection into concise readable information, providing exceptional clarity into your complex IT environment.

And with views from top-down (vendor / contract) to bottom-up (installs / software) analysis of your software landscape has never been easier.

Delivered seamlessly over the cloud

Hosted on the Salesforce compute platform with static files held as AWS (Sydney) encrypted S3 storage, your data is available **anywhere, on any device, 24x7.**

Simplified licensing

Licensed on endpoints there are no transaction-based metrics or limitations on users, just a straight-forward count of the number of desktops and servers that are to be scanned.

Local resources

Fast and efficient support with easy access to services from our responsive Adelaide based team.
